

Wallowa Whitman National Forest

Preparedness and Staffing Plan

This plan will serve to guide fire managers in making appropriate decisions regarding fire preparedness and resource staffing on the Wallowa Whitman National Forest. It is intended to serve as a guide as fire management is a dynamic process, and at times, adjustments will be needed to account for unique local, regional, and national conditions.

Duty Officers

The Wallowa Whitman National Forest will designate a Duty Officer for the Forest as a whole and each District/Zone will designate a Duty Officer for the local unit for all periods in which fire management decisions can be expected to be made. The duty officer should be readily available by phone or radio, and be able to respond to their office timely if needed. It is not required that the duty officer be at work, and that some individuals may choose to be a duty officer while not at work.

- Outside of fire season, dispatch should have a call down list of duty officers at a minimum, and at least one individual on the call down list should be available (when conditions warrant).
- During fire season, duty officers will be identified daily on the BMIDC website.

The Forest Duty Officer is responsible for daily oversight of the WWNF fire program. This includes setting suppression priorities at the Forest level, providing support to District/Zone Duty Officers, coordination with BMIDC, and support to District Rangers, Forest Supervisor, and their respective staffs. They will also provide coordination with the Regional Office, cooperators and adjacent units.

Zone/District Duty Officers are responsible for daily oversight of the fire suppression resources and activities on their assigned units. This includes coordination with their Ranger(s) and staff, Forest Duty Officer, provide management oversight of fire suppression personnel, ensure appropriate multiple-day preparedness staffing, provide support to assigned Incident Commanders, set suppression priorities within their zone, and provide logistical support of on-going incidents..

FOREST/DISTRICT DUTY OFFICER QUALIFICATIONS - The Forest is a High Complexity unit.

Reference "Forest Service Fire & Aviation Guide – Chapter 4.14 Forest Service Fire and Aviation (FAM) Duty Officer (DO) Standard".

MINIMUM QUALIFICATION STANDARDS FOR DUTY OFFICERS

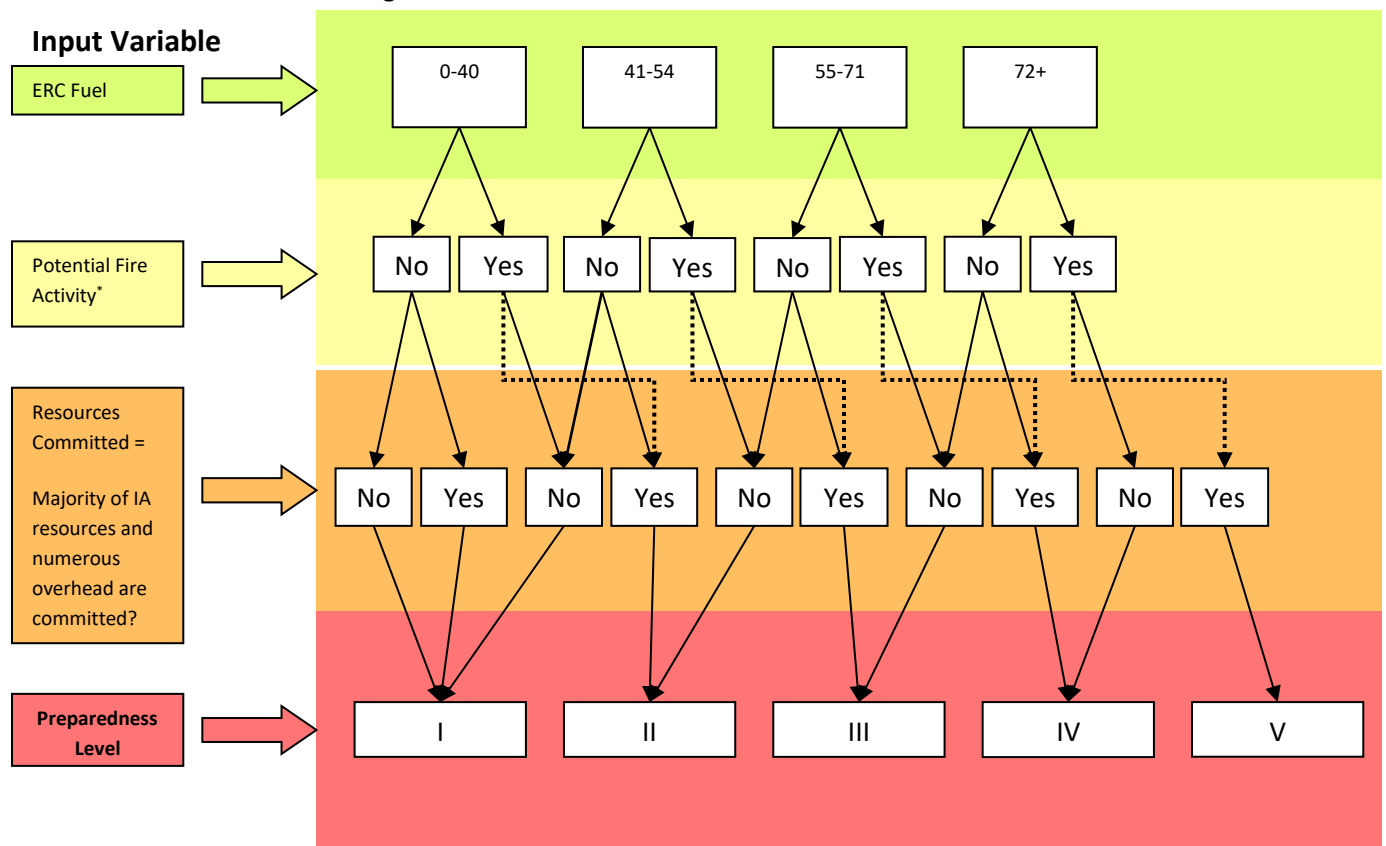

Complexity	Forest DO	District/Zone DO
High	DIVS -and- ICT3 or RXB2 -OR- ASGS -and- ICT3 (Currency not required)	DIVS -and- ICT3 or RXB2 -OR- ASGS -and- ICT3 (Currency required)

Forest Preparedness Levels

The purpose of established Preparedness Levels is to identify actions to be taken to ensure an appropriate level of preparedness/readiness for the existing and potential fire situation across the Forest.

The Forest Preparedness Level is partly determined by a flow chart filtered by 3 input variables. Those input variables are fire danger (ERC), potential fire activity, and resource availability (commitment). Prescribed fire activity may also be taken into account when determining a preparedness level.

FDRA calculations of ERC's are compiled by BMIDC staff throughout the normal fire season for across the forest. Fire Managers will utilize ERC calculations from these FDRA's to determine the appropriate ERC Fuel level to use in the following chart.

*Potential Fire Activity = The potential for multiple starts or large fires from predicted lightning or significant human starts occurring.

This flow chart, in addition to other considerations and discussion, will be used to determine the Forest Preparedness Level. The Forest Duty will ensure that the preparedness level will be calculated weekly by the and the determination will remain unchanged for the week unless conditions warrant revisiting this determination earlier. Forest Preparedness Levels may influence resource allocation on portions of the Forest not experiencing significant activity. This will ensure sufficient resources are available for the

fire management wherever they may be needed on the Forest. Forest Preparedness Levels should also be responsive to the Northwest Preparedness Levels, which are based on current activity, severity, and resource availability.

Preparedness Level Descriptions and Actions

Descriptions

Preparedness Level 1 – The Forest is experiencing low fire danger and there is minimal wildland fire activity. There is little or no commitment of Forest resources at the local level.

Preparedness Level 2 – The Forest is experiencing moderate fire danger and wildland fire activity is moderate. There is minimal commitment of Forest resources at the local level.

Preparedness Level 3 – The Forest is experiencing high fire danger and there is moderate to high fire activity. Additional resources are potentially being ordered and mobilized to the Forest.

Preparedness Level 4 – The Forest is experiencing high or extreme fire danger and large/multiple fire activity is possible. Significant Forest resources are committed and additional resources are being ordered. Incident management teams may be on the Forest.

Preparedness Level 5 – The Forest is experiencing extreme fire danger and large/multiple fire activity is possible or occurring. Most Forest resources are committed and additional resources are being ordered. Incident management teams may be on the Forest.

Minimum Staffing

This plan considers the following resources a “Module”:
with staffing as described:

- Hand crew staffed with 5 including an qualified IC.
- Hand crew staffed with 10 including 2 qualified ICs - is considered 2 modules. (capable of splitting into 2 separate independent modules)
- Type 3/6 engine staffed with minimum of 3 including an qualified IC.

Resources in excess of the required minimum staffing (for current and reasonably expected conditions) can be made available by the Forest to support fires regionally or nationally.

Modules supporting initial attack within the Blue Mountain area (BMIDC coverage area) can be considered in minimum staffing calculations as long as they are available to return to their District as needed for initial attack assignment. If a module is committed and not available to return to the District for initial attack assignment, it is considered on assignment and does not count in minimum staffing calculations until it returns to it’s home district or is available for dispatch on it’s home district.

Resource staffing will be communicated daily by each District/Zone by entering resource status at the appropriate dispatch center website.

National and regional shared resources are not included in calculating minimum staffing unless committed to a district/zone for initial attack and are unavailable for other assignments.

Minimum Staffing Guide-Wallowa Whitman National Forest										
Preparedness Level	Whitman		LaGrande		Wallowa		Forest Wide		Totals	
	Module	DO	Module	DO	Module	DO	ICT3*	Forest DO	modules	DO
maximum	9	4	5	3	7	4	NA	3	21	14
5	7	1- required, 1-on call	4	1- required, 1-on call	5	1- required, 1-on call	3	1- required, 1-on call	16	4- Required, 4-on call
4	5	1- required, 1-on call	3	1- required, 1-on call	4	1- required, 1-on call	2	1- required, 1-on call	12	4 required, 4-on call
3	3	1- required, 1-on call	2	1- required	3	1- required, 1-on call	1	1-on call	8	3- required, 1-on call
2	2*	1-on call	1*	1-on call	2*	1-on call	0	1-on call	5*	4-on call
1	1*	1-on call	1*	1-on call	1*	1-on call	0	1-on call	3*	4-on call

On call= duty officer available via phone and able to respond to office if needed.
 Required= duty officer working regular hours and available via phone and able to respond to the office if needed.
 *=Modules may not be staffing daily, but should be available for response within 2 hours of activation.
 *= ICT3's available that are not designated Duty Officers for the Districts/Forest

Extended Attack Capability

Each District should manage fire leadership capability consistent with conditions, and be prepared to staff fires under current and expected fire danger conditions. If a district is unable to maintain needed capabilities for any given time, the district duty officer should coordinate with Forest Duty officer and adjacent districts to assist with coverage and/or staffing.

The Northeast Oregon Type 3 IMT may be used to supplement extended attack capabilities.

Severity Funded Resources

The Forest should consider increasing staffing with severity funded resources when:

- When the Forest Preparedness Level is at 3 or higher
- Any one of the Input Variables used in determining the Forest Preparedness Level is well above what would normally be expected

Additional resources are phased in as fire danger increases. Typically use of severity funding includes:

- extend hours and/or days of initial attack resources and lookouts, such as 9 hour days 6 days a week,
- extend hours and/or days of duty officers and fire management oversight,

- increase initial attack resources by contractors or out of local area resources, such as engines, incident commanders, handcrews (if needed for initial attack),
- increase initial attack aircraft such as Single Engine Air Tanker (SEAT), additional rappel platform, detection plan, air attack, or helicopter.
- Increase fire management overhead such as ICT3, line overhead, and single resource bosses.

Severity funding availability and guidance for use are provided annually by the regional office.

Wallowa Whitman National Forest Initial Attack Resources

RESOURCE CATEGORY		LOCATION	MODULE/ DESIGNATOR
INITIAL ATTACK CREW	Whitman	Unity Baker Halfway	5 person/C 1-1 10 person/C 1-3 10 person/C 1-2
